

Reform Democrats of the New Commonwealth · 2026

Project ARA 2028 Legislative Sequencing Map

Legislative Ecosystem Document 1 of 3 · v3 · Aligned to REF_RDNC_Framework_v25_2026

This document maps the full legislative strategy of the RDNC agenda — which bills to introduce, in what order, through which legislative vehicles, across three implementation phases. It is the spine of the legislative ecosystem. Every bill framework and legislative brief that follows references this map.

Governing assumptions: Senate filibuster likely remains in place during Phase I. Courts are mixed to hostile on regulatory expansion. House margins are narrow. The executive branch is the most powerful early tool. Reconciliation is the primary Senate vehicle for Phase I. All bills are designed to function in degraded form if weakened during passage.

v3 changes: Political dynamics & living-sequence disclaimer added (Section below). This is the primary new addition in v3. All v2 content unchanged.

This Sequence Is a Living Strategy, Not a Fixed Plan

This map is calibrated to political and institutional conditions as of April 2026. Political windows open and close faster than implementation phases. The sequence below represents the optimal path under current conditions — it is not a guarantee, a contract, or a rigid timetable.

When conditions shift materially, the sequence adapts. Triggers that warrant reassessment include:

- A severe economic recession — may accelerate Phase II social spending or force Phase I contraction
- A reform-aligned Senate supermajority — may allow Phase II or III proposals to be introduced earlier
- A hostile Supreme Court ruling — may require rerouting constitutional exposure; certain Phase II vehicles may need substitution
- A political crisis or wave election — may open a window for landmark legislation outside the expected phase timeline
- Sustained public option success faster than projected — may permit Phase III healthcare earlier than Year 8
- Coalition collapse or midterm loss — may require defensive consolidation: protect Phase I gains, pause Phase II expansion

The principles are fixed. The order is not. The sequencing discipline in this document — build constituency before expanding, prove before scaling, never lead with constitutional fights — applies regardless of which version of the sequence is active. When conditions change, the sequencing logic is the tool for recalibrating. The specific bill order is what changes; the discipline behind it does not.

System-Level Legislative Principles

1. Use Reconciliation Aggressively But Selectively. Front-load cost reduction and direct benefits. Do not put controversial structural reforms into early reconciliation bills — they invite Byrd Rule challenges and political overreach narratives.
2. Sequence by Political Capital. Order: popular and simple → popular and complex → controversial and necessary. Never lead with constitutional fights.
3. Build Policy Stickiness. Every bill must create constituencies who benefit and who will resist rollback. Childcare recipients, healthcare enrollees, and direct-payment beneficiaries are the most durable political shields.
4. Design for Partial Passage. Every bill must still produce benefit if cut in half during Senate negotiation. A weakened bill that passes is better than a pure bill that fails.
5. Expect Counterattack. Legal challenges, media narratives, industry lobbying, and economic pressure are not risks — they are certainties. Each bill entry below includes attack surface and defense strategy.
6. Name Policies for Survivability. Some proposals fail not because of implementation difficulty but because they are easy to weaponize rhetorically. Frame every policy around what it delivers, not what it restricts. "National Safety Certification Standard" survives; "gun licensing" does not. "Fraud and Foreign Interference Enforcement" survives; "disinformation laws" does not. The policy is identical. The name determines whether it lives long enough to be debated on its merits.

Project ARA 2028 vs. Project 2025 — Legislative Readiness

An honest readiness audit as of 2026. 12 full bill frameworks, a legislative glossary, a personnel methodology document, and a complete sequencing map now constitute the ARA legislative layer. The remaining gap is no longer documents — it is organizational. The actual personnel database, the training infrastructure, and the media ecosystem are the work that happens in the world, not on paper.

Dimension	RDNC	Project 2025	Assessment
Legislative Readiness	9 / 10	9 / 10	12 complete bill frameworks, sequencing map, glossary, and personnel methodology. Bill text gap closed. Personnel database not yet built — that is the remaining gap.
Executive Readiness	7 / 10	10 / 10	Personnel pipeline methodology and 15 position profiles complete (Leg13). Actual candidate database not yet built. Executive action tracks in sequencing map need deeper development.
Political Durability	8.5 / 10	5 / 10	Coalition-building and policy stickiness by design. P2025 highly reversible after power loss — demonstrated by how quickly it was implemented and how easily it could be reversed.
Systemic Impact Potential	9 / 10	8 / 10	Long-term structural change across all categories. P2025 fast but unstable. ARA designed for durability.
OVERALL	8.5 / 10	8.5 / 10	Legislative parity achieved. Remaining gap: actual personnel database and training infrastructure. Organizational work, not document work.

The single remaining organizational gap: Project 2025 deployed pre-vetted agency-level appointees on Day 1. The ARA has the methodology and 15 position profiles (Leg13 — Personnel Pipeline). The actual database of vetted reform-aligned candidates for every major agency position does not yet exist. Building that database is an organizational task that must begin years before power is obtained — not after. It determines whether the legislative map below can actually be executed.

Phase 0 — Winning Power (Before Legislation Begins)

The sequencing map below assumes power has been obtained. That assumption requires its own strategy.

Primary Strategy

RDNC candidates run in Democratic primaries on the reform platform — not as a third party. The goal is to replace institutional Democrats who have no governing vision with reform Democrats who do. Primary targets are districts and states where the incumbent is either retiring, vulnerable, or demonstrably out of step with a cost-of-living electorate. The RDNC framework serves as the platform — candidates run on it explicitly, which distinguishes them from generic progressive or centrist positioning.

Coalition Building

Phase I voter coalition: working-class voters responding to cost-of-living relief, small businesses responding to antitrust and anti-monopoly framing, and moderates responding to anti-corruption positioning. These three groups have high overlap with swing constituencies and low overlap with tribal partisan identity — which is a feature, not a bug. The coalition expands in Phase II to include organized labor (training and wage floor), climate voters (energy investment), and families (childcare). Lead with the Phase I coalition. Do not try to build the full coalition before winning anything.

Media and Institutional Resistance

RDNC candidates should expect three categories of institutional resistance: (1) Democratic establishment opposition in primaries — counter with the readiness gap argument and the absence of a governing vision from the incumbent; (2) Republican media framing — counter by leading with cost-of-living and anti-corruption, which are harder to caricature than structural reform language; (3) corporate and donor pressure — counter by designing the fundraising model to not depend on it. Candidates who win on small-dollar fundraising and cost-of-living messaging are harder to pressure than candidates who depend on donor class approval.

The Personnel Pipeline

The position profiles, vetting methodology, and priority tier framework for the 15 most critical agency positions have been developed (see Leg13 — Personnel Pipeline). What does not yet exist is the actual database of vetted candidates — the organizational work of identifying, vetting, and building consensus around specific reform-aligned people for each position. Project 2025 had 20,000+ vetted candidates ready before the election. ARA has the methodology. The database must be built years before power is sought — not after. This is the highest-priority organizational gap in the entire ecosystem.

Executive Action Capacity — What Doesn't Need Congress

Of the 65 proposals in the ARA framework, 33 require legislation and 32 are achievable through executive action — presidential directives, agency rulemaking, departmental reorganization, or diplomatic outreach. This is not a minor distinction. It means a reform administration can deliver visible, meaningful change in the first 100 days without a single Senate vote.

The standard campaign attack — "you'll never get anything through Congress" — is answered by this: half our agenda doesn't go through Congress. The answer to a hostile Senate is not surrender. It is sequencing.

However, not everything that can move on Day 1 should move on Day 1. The same sequencing discipline that governs the legislative track applies to executive actions. Moving too early on volatile proposals creates the attack surface that defines the administration before the cost-of-living wins have landed. The three tiers below reflect the same logic as the legislative phasing: build constituencies first, then expand.

Tier	Proposals	Rationale
Day 1 (~10 actions)	- Diplomatic Relationship Restoration - Pentagon Budget Audit Accountability - Reinforce War Powers Act - Cyberwarfare Expansion Directive - Cooperative Mining with Allied Nations - FDA Split Announcement (intent) - Climate Preparedness Corps Announcement - Bipartisan Detention Oversight - Shutdown Accountability (congressional rules push) - Public Health Infrastructure Restoration — executive order restoring CDC/NIH funding to 2019 inflation-adjusted baseline; reinstating ACIP independence; directing HHS to restore Vaccines for Children program	High public support, low legal exposure, fast visible impact, or directly enables the legislative agenda. These signal intent and competence immediately.
Month 1–6 (~12 actions)	- Waste Export Ban (EPA rulemaking) - Drug Rescheduling Review Launch - Non-Profit Prison DOJ Guidance - Farm Labor Enforcement Directive - Shoreline & Fishery Protection - Marine Life Rulemaking - Agricultural Electrification Grants - Desalination Infrastructure Grants - Food Priority Laws - Military Contractor Reform Directive - Expand NASA/Space Force (NDAA request — Phase II proposal per Framework v25; executive action initiates the NDAA request in Phase I; full structural expansion is achieved in Phase II) - Multilateral Peacekeeping Coalition Outreach	Move after first legislative wins land. Benefits from cost-of-living and anti-corruption wins establishing credibility. Court challenges are manageable if the public frame is right.
Phase II+ (~11 actions)	- Minimum Wage Federal Reserve Coordination (needs COLT Act wins first) - Bodily Autonomy Judicial Pathway (needs Supreme Court shift — Phase III) - Drug Rescheduling Completion (needs public harm reduction frame built) - Scandinavian Education Model Implementation (needs childcare wins for credibility) - Nuclear Diplomacy via Allied Mediation (needs alliance restoration results) - Immigration Rulemaking (most volatile — needs economic wins first) - Fraud & Foreign Interference Enforcement (needs ACFM Act frame established — Month 3-6 minimum) - FDA Reorganization (implementation — announcement Day 1, full reorganization Phase II) - Climate Preparedness Corps (implementation — announcement Day 1, consolidation Month 6+)	Hold until legislative wins or political conditions are established. Moving these early either creates the wrong defining fight or depends on prior wins to be credible.

- Patent Law Reform (Commerce/USPTO — needs anti-monopoly legislative wins first)
- Local News & Media Ownership Standards (FCC rulemaking — CPB restoration Day 1 executive, ownership standard legislation Phase I)

Executive Action by Department — The Day 1 Cabinet Briefing

Organized by cabinet secretary, this is the briefing document a transition team uses to assign Day 1 directives.

Department / Secretary	Day 1 Directives	Month 1–6 Follow-On
Attorney General (DOJ)	Initiate Pentagon audit accountability review; issue bipartisan detention oversight directive.	Farm labor enforcement directive; Non-profit prison DOJ guidance; Fraud & foreign interference enforcement (Month 3+).
Secretary of Defense (DoD)	Pentagon audit accountability announcement; cyberwarfare expansion directive; War Powers Act enforcement memo.	Military contractor reform directive; Expand NASA/Space Force NDAA request (Month 3). Note: NASA/Space Force is a Phase II proposal per Framework v25 — the NDAA request initiates in Phase I.
Secretary of State	Diplomatic relationship restoration outreach; cooperative mining allied coordination begin.	Nuclear diplomacy via allied mediation outreach (Month 3+); multilateral peacekeeping coalition discussions.
Secretary of Energy (DOE)	Renewable and nuclear investment priorities memo; desalination infrastructure grant review begin.	Desalination infrastructure grants (Month 2); Agricultural electrification grant launch (Month 3).
Secretary of Agriculture (USDA)	Farm labor enforcement coordination with DOL; aquaculture protection review.	Food priority laws rulemaking (Month 3); Agricultural electrification grants (Month 4).
EPA Administrator	Climate Preparedness Corps reorganization announcement; shoreline protection review.	Waste export ban rulemaking (Month 2); Marine life and fishery rulemaking (Month 3); Climate Preparedness Corps consolidation (Month 6).
Secretary of HHS / FDA	FDA split announcement — intent and timeline; biosafety standards review begin; executive order restoring ACIP independence and CDC/NIH funding to 2019 baseline; Vaccines for Children program restoration directive.	Drug rescheduling DEA coordination launch (Month 2); school vaccination standards rulemaking (Month 3); FDA split implementation plan (Phase II); public health workforce pipeline rebuild (Phase I legislative).
Secretary of Labor (DOL)	Farm labor enforcement directive coordination; shutdown accountability communication.	Minimum wage Federal Reserve coordination (Phase II — after COLT Act).
Secretary of Commerce	Cooperative mining allied outreach; local news media ownership review begin; semiconductor investment program launch.	Media ownership standards rulemaking (Phase I — after FCC review); strategic domestic technology investment implementation (Phase I).

Note: The Day 1 directives above are the announcement and initiation layer. Full implementation of most executive actions requires 6–18 months of agency rulemaking. The Day 1 action signals intent and starts the clock; the Month 1–6 tier represents when substantive rulemaking and enforcement begins.

Phase I — Foundation (0–5 Years)

Lock in fast, visible wins using the easiest legislative paths. Establish political capital and voter trust. Everything in Phase II depends on Phase I succeeding.

TRACK A — BUDGET RECONCILIATION (SIMPLE SENATE MAJORITY)

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
Bill 1	Cost of Living Reduction & Tax Simplification Act - IRS pre-filled tax return system (opt-in rollout) - Expanded IRS enforcement targeting incomes \$400K+ - Childcare subsidy expansion (cap at 7% of household income) - ACA premium subsidy extension	Budget Reconciliation All provisions carry direct budget impact, qualifying for reconciliation. Delivers the two most universally felt cost reductions — taxes and childcare — within the first year. Creates immediate constituency that is politically costly to reverse.	Phase I Months 1–18 None — anchor bill	Attack: IRS expansion; government overreach Defense: "Making taxes easier, not higher." Opt-in framing. Enforcement targets wealthy evasion only. Fallback: Pre-filled returns only; enforce separately via executive action.

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
Bill 2	Infrastructure & Industrial Capacity Act - Grid modernization and renewable energy investment - Domestic semiconductor and battery manufacturing grants - Airport and USPS modernization funding - Federal inspector and auditor workforce expansion	Budget Reconciliation Infrastructure spending is broadly popular across party lines and directly budget-scoreable. Frames national security and job creation together — the most durable political combination for infrastructure investment.	Phase I Months 6–24 Bill 1 (political momentum)	Attack: "Too expensive"; wasteful government spending Defense: Frame as national security + job creation. Publish projected ROI annually. Fallback: Tax incentives for private infrastructure investment as partial substitute.

TRACK B — EXECUTIVE ACTIONS (DAY 1–100)

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
EO 1	Aggressive Antitrust Enforcement Directive - Direct DOJ and FTC to prioritize duopoly and market capture cases - Expand definition of anti-competitive behavior in enforcement guidelines - Federal procurement reform to favor competitive markets	Executive / DOJ-FTC Direction Requires no legislation. Immediate visible action on an issue with high bipartisan public salience. Establishes accountability posture before Congress acts.	Phase I Day 1–30 None	Attack: "Anti-business"; economic instability fears Defense: "Restoring competition, not punishing success." Use existing law. Start with most egregious cases. Fallback: Conduct-based restrictions only if legislative track fails.

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
---	-----------------------	---------------------------------	---------------------------------	-----------------------------

E O 2	Data Transparency & Federal Privacy Baseline - Agency-level data transparency and consent enforcement - Federal contractor data handling standards - Foundation for legislative data ownership framework	Executive / Agency Rulemaking Establishes baseline protections immediately while legislative track develops. Aligns with existing EU frameworks to limit legal vulnerability.	Phase I Day 1–90 None	Attack: Tech industry resistance; enforcement skepticism Defense: Start narrow — portability and consent. Expand legislatively in Phase II. Fallback: Disclosure requirements only if rulemaking faces legal challenge.
----------------------	---	---	--------------------------	--

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
E O 3	Student Loan & Workforce Training Expansion - Expand existing income-driven repayment where legally viable - Launch workforce training enrollment with unemployment benefits - Expand vocational and behavioral health program access	Executive / Agency Authority Uses existing agency authority to deliver tangible benefits without Congressional action. Builds the workforce training constituency needed for Phase II corporate training tax framework.	Phase I Day 1–60 None	Attack: Legal challenges to loan authority (per Supreme Court precedent) Defense: Narrow to existing statutory authority only. Legislative fix in Bill 1. Fallback: Focus on training expansion; hold loan relief for legislative vehicle.

TRACK C — HIGH-SALIENCE STANDALONE LEGISLATION

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
B il l 3	Anti-Corruption & Fair Markets Act - Ban congressional insider trading with criminal penalties - Mandatory financial disclosure for all federal officials - Enhanced penalties for repeat antitrust violations - Executive liability for corporate fraud schemes	Standalone Legislation (60-vote Senate) High public salience — polls consistently above 70% across party lines. Designed to force opposition into a politically untenable position. Criminal penalties rather than civil create enforcement teeth.	Phase I Months 6–18 Political capital from Bills 1–2	Attack: Quiet bipartisan resistance; weak enforcement concerns Defense: "Same rules for everyone." Public pressure campaign. Make it a recorded vote. Fallback: Mandatory disclosure + delayed trading windows if full ban fails.

Phase I Success Condition: By the end of Year 2, voters must experience lower friction (simpler taxes), lower costs (childcare), and visible fairness (anti-corruption). If these three are not tangible, the midterm environment will be hostile and Phase II stalls.

Phase II — Structural Expansion (5–15 Years)

Shift structural incentives using momentum built in Phase I. Each reform expands systems already proven popular. High risk of backlash — sequence by political capital.

TRACK A — SECOND RECONCILIATION WINDOW

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
Bill 4	Family Stability & Workforce Investment Act - Expand childcare to near-universal access - Workforce training tied to unemployment and retraining - Earned income support expansion - Corporate tax incentives for employee training programs	Budget Reconciliation Builds directly on Bill 1 childcare expansion — extends a proven popular program rather than launching a new one. Uses reconciliation path again. Corporate training incentive shifts healthcare burden off employers.	Phase II Year 3–5 Bill 1 success; childcare constituency established	Attack: Cost; "dependency" Defense: "Lowering costs for working families." Build on what is already working. Fallback: Tax credits and targeted subsidies if full expansion fails.

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
Bill 5	Billionaire Wealth & Digital Services Tax Act - Progressive annual tax on billionaire income (mark-to-market / deemed realization) - Targeted revenue levy on large digital services platforms - Close offshore account and shell corporation loopholes - Revenue directed to healthcare, UBI, and infrastructure funds	Budget Reconciliation Budget-relevant provisions qualify for reconciliation. Digital services levy has higher public sympathy than direct wealth tax — lead with it. International coordination reduces capital flight risk.	Phase II Year 3–6 Phase I coalition established; economic conditions permitting	Attack: Capital flight; "punishing success" Defense: "Fair contribution from those who benefit most." Lead with digital platforms. Coordinate internationally. Fallback: Stronger capital gains reform and offshore closure without wealth tax floor.

TRACK B — SECTORAL LEGISLATION

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
Bill 6	Public Option Healthcare Expansion Act - Public option for small businesses and rural markets first - Voluntary enrollment — "if you like your plan, keep it" - Expand to additional markets based on demonstrated success - Regulatory framework for insurer participation	Standalone Legislation (wedge strategy) Start where private coverage is weakest — rural markets and small businesses — to minimize industry opposition. Expand from demonstrated success rather than top-down mandate. Divide insurer and hospital opposition.	Phase II Year 4–7 Bill 1 ACA expansion; public trust in government healthcare	Attack: "Government takeover"; industry lobbying Defense: Start narrow. Expand based on results. Guarantee plan choice. Fallback: Stronger ACA-style expansion if full public option blocked.

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
B il l 7	Digital Rights & Data Fiduciary Act • Data portability rights • Consent enforcement with penalties • Compensation framework for commercial data use • Foundation for full data ownership monetization (Phase III)	Standalone Legislation Builds on executive order baseline. Aligns with EU GDPR frameworks reducing legal vulnerability. Start narrow on portability — expand to compensation later.	Phase II Year 3–5 EO 2 baseline established; public awareness of data issues	Attack: Tech industry resistance; complexity Defense: Align with EU frameworks. Start with portability — broad public support. Fallback: Strong privacy law without ownership monetization if industry opposition is too strong.

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
B il l 1 2	National Firearm Standards Act • Track A: Hunting/Sporting License clarified — manual-action long guns only, state-administered, unchanged. Handguns and semi-automatics explicitly excluded from Track A coverage. • Track B: Federal Civilian Ownership Certificate — delivered free through military installations and National Guard facilities. Covers handguns, semi-automatics, and assault-category weapons. • Tiered renewal schedule: 10 years (manual-action) → 8 years (semi-auto hunting) → 6 years (handguns) → 4 years (high-capacity semi-auto) → 3 years (assault-category) → 2 years (NFA-regulated automatic) • Grandfathered weapon transition: keep forever, sell to government buyback at fair market value, upgrade via Track B for full transferability, or inherit within immediate family with ATF notification • No federal registry. State handgun licenses preserved for intrastate purposes with no federal effect.	Standalone Legislation (60-vote — most constitutionally complex Phase II bill) Hunters are completely untouched — their system continues unchanged. The free military/Guard delivery removes the access barrier attack. The tiered renewal creates proportional accountability without blanket restriction. The grandfathered transition is voluntary and fair-value compensated. The Second Amendment savings clause citing Heller, McDonald, and Bruen is essential and non-negotiable.	Phase II Year 4–7 Phase I anti-corruption wins establish government accountability credibility; full Bruen (2022) analysis completed pre-introduction	Attack: "Gun grab." "Registry by the back door." "Punishing law-abiding owners." "Poll tax on the Second Amendment." Defense: "The military will train you for free. The right is preserved. Hunters are untouched. Grandpa's rifle goes to your kids. We just ask that the most dangerous weapons have the most frequent accountability checks — which is how we treat every other dangerous item in this country." Fallback: Track A alone (hunting license clarification) passes as standalone establishing the jurisdictional framework. Track B follows in next legislative window.

TRACK C — FEDERAL-STATE PARTNERSHIP MODEL

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
---	-----------------------	---------------------------------	---------------------------------	-----------------------------

Bill 8	Housing & Community Investment Act - Federal funding tied to corporate home ownership restrictions - Zoning incentive grants for states adopting model legislation - Vacant property tax frameworks for state adoption - Affordable housing supply expansion grants	Federal Incentive / State Partnership Works with federalism rather than against it. Federal funding as leverage avoids constitutional overreach. States adopt on their own terms — accelerating adoption without mandate.	Phase II Year 2–6 Bill 1 (funding); political capital	Attack: Property rights; "market distortion" Defense: "Homes for Americans, not investment portfolios." Focus on vacant first. Fallback: Tax incentives for occupancy; voluntary state adoption model.
---------------	---	---	--	--

Phase II Risk Point: Economic recession, industry counterattack, or public perception of overreach can each stall this phase. If any of these materializes, shift to defensive consolidation — emphasize competence and stability, pause controversial expansions, and protect Phase I gains. Phase II compresses; it does not collapse if Phase I held.

Phase III — Systemic Transformation (15–30 Years)

Lock in structural convergence only after Phase I and II have built the political conditions. These are the reforms that require prior dominance of earlier systems to be viable.

TRACK A — HEALTHCARE FULL TRANSITION

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
Bill 9	Universal Coverage Transition Act - Gradual expansion of public coverage by age band and region - Transition pathway for existing private plans - Provider reimbursement framework - Long-term funding mechanism tied to military reallocation	Standalone Legislation (post-public option dominance) Only viable after public option has organically displaced private coverage in key markets. Transition by age band or region reduces shock. Attempted before Phase II succeeds, this bill fails and damages the agenda.	Phase III Year 8–15 Bill 6 public option established and dominant; political supermajority	Attack: Cost shock; provider resistance; ideological opposition Defense: Transition gradually. Guarantee existing coverage during transition. Fallback: Permanent hybrid system — public option and private plans coexist indefinitely.

TRACK B — AI & CAPITAL FRAMEWORK

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
Bill 10	American Innovation & Public Equity Act - Government co-investment framework in AI and autonomous systems sector - Public equity capture mechanism via licensing and tax structure - Sovereign wealth fund governance structure - Returns directed to healthcare, Social Security, and infrastructure	Standalone Legislation Start as voluntary co-investment — expands gradually as model proves out. Requires international coordination to prevent capital flight. Norway oil fund serves as structural analog.	Phase III Year 6–12 AI sector maturity; international coordination; Phase II revenue base	Attack: Capital flight; innovation slowdown; complexity Defense: Voluntary start. Coordinate internationally. Point to Norway fund as proof of concept. Fallback: Tax-based redistribution of AI profits without direct equity ownership.

TRACK C — GOVERNANCE REFORM

#	Bill Title & Contents	Legislative Vehicle & Rationale	Phase / Timeline & Dependencies	Attack / Defense / Fallback
Bill 11	Democratic Institutions Reform Act - Campaign finance restructuring (Citizens United workaround or amendment) - Supreme Court term limits and balance restoration - Incremental judicial reform measures	Constitutional / Legislative (conditions-dependent) Constitutional fights require political conditions that do not currently exist. Build state-level precedent first. Avoid direct confrontation until Phase I and II have created durable political	Phase III Year 10–20 Supermajority; state-level precedent; court composition shift	Attack: Constitutional barriers; legitimacy crisis Defense: Incremental, state-first strategy. Ethics reforms as first step. Fallback: Ethics and transparency reforms only — build the case over time.

	State-level ranked choice and districting uniformity	coalition.		
--	--	------------	--	--

Phase III Condition: These reforms are only attempted after Phase I and II have created durable political conditions. Constitutional fights, full healthcare takeover, and governance overhaul attempted before Phase II succeeds will fail and damage the entire agenda. Patience is not weakness — it is strategy.
